

The Australian Pituitary Foundation Ltd
in association with the
Princess Alexandra Hospital
present

Pituitary Diseases And Treatments That Offer Effective Outcomes

Located at the base of the brain, the pituitary is commonly referred to as the master gland because of the role it plays in controlling the function of all aspects of the body's vital endocrine glands.

These glands produce our hormones, complex secretions which define the differences between men and women; control our fertility, our emotions, our sex drive, and virtually make life worth living. Any disturbance of pituitary function is potentially devastating.

You are invited to a public education seminar, which will address the function of the pituitary gland, the consequences of pituitary disease and the latest treatments and research.

Patients, families, carers and health professionals are all welcome to attend.

How to get to the Seminar

'PA' bus stop
BCC Hotline 131230
on Logan Road.
Street parking is available.

A Car Parking Station is located opposite PA Hospital with covered walkway;
