

The Australian Pituitary Foundation Ltd
 in association with the
 Princess Alexandra Hospital
 present

Pituitary Diseases And Treatments That Offer Effective Outcomes

Located at the base of the brain, the pituitary is commonly referred to as the master gland because of the role it plays in controlling the function of all aspects of the body's vital endocrine glands.

These glands produce our hormones, complex secretions which define the differences between men and women; control our fertility, our emotions, our sex drive, and virtually make life worth living. Any disturbance of pituitary function is potentially devastating.

You are invited to a public education seminar, which will address the function of the pituitary gland, the consequences of pituitary disease, medical treatments and the psychological aspects of living with a chronic disease.

Patients, families, carers and health professionals are all welcome to attend.

How to get to the Seminar
 'PA' bus stop
 BCC Hotline 131230
 on Ipswich Road.
 Street parking is available.
 A Car Parking Station is located opposite PA Hospital with covered walkway
