# Weight Management and Diabetes in Pituitary Disease

## Free Public Seminar

*Located at the base of the brain, the pituitary is commonly referred to as the master gland because of the role it plays in controlling the function of all aspects of the body's vital endocrine glands.*

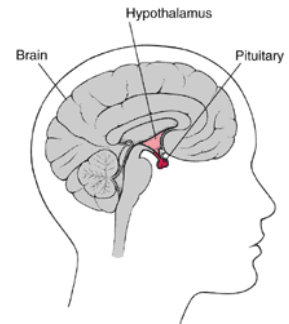

*These glands produce our hormones, complex secretions which define the differences between men and women; control our fertility, our emotions, our sex drive, and virtually make life worth living.*

*This seminar will address the function of the pituitary gland with specific reference to weight management and diabetes in pituitary disease.*

*Patients, families, carers and health professionals are all welcome to attend.*

## Saturday 30 July 2005

### 9.00am – 1.00pm
