

# AUSTRALIAN PITUITARY FOUNDATION LTD

ABN: 13088357902

Located at the base of the brain, the pituitary is commonly referred to as the master gland because of the role it plays in controlling the function of all aspects of the body's vital endocrine glands.

These glands produce our hormones: complex secretions which regulate growth, define the differences between men and women, control our fertility, affect our emotions and sex drive, and determine our metabolic rate and body composition.

This seminar will address the management of pituitary illness.

Patients & adolescents, adult family members, carers, friends and health professionals are all welcome to attend.

Registration details on back of flyer.

PRESENTS
